

## AOTEA CENTRE AUDITORIUM

Canam successfully tendered for the Aotea Centre Auditorium Fitout in 1989. The fitout project included the Main Auditorium and Fly Towers. Work included the installation of the laminated timber acoustic ceiling panels, acoustic wall boxes, molded fibrous plaster balustrades, seating and the Tullowood stage floor.

The work was coordinated with a large number of specialist subcontractors. The originally tendered work was successfully completed on time and further work packages including entry foyers and reception / convention areas were negotiated with Canam.
