

DAIMLER CHRYSLER

This project involved the construction of a new showroom and corporate offices for DaimlerChrysler. The structure was designed and constructed as an extension to the existing national parts distribution centre in Mt Wellington, Auckland and now brings together all the facets of the business into a central location.

The facilities include a tiled and glazed showroom, offices boardroom, designed for both business utility and corporate function / product launches.

The structure consists of precast concrete and block walls. A steel supported concrete first floor and steel structure supporting roofing.

Extensive use of quality finishes were used to create an office environment second-to-none and a display area commensurate with the type of vehicles the client wishes to display.

In Brief
