

NAUHRIA PRECAST FACTORY

Canam carried out the extension and extensive redevelopment of this facility, including construction of a new office block and extension to the existing factory.

The project was staged to allow factory production to proceed unimpeded throughout the redevelopment. In spite of issues with difficult site conditions and contamination having to be overcome the project was completed on time and budget.

Construction of the factory included a conventional structural steel frame with extensive use of precast elements to showcase the clients capabilities in production of feature precast concrete work.
